dt: 24 April 1952

Professor Howard R. Aiken
 Harvard Computing Laboratory
 Harvard University
 Cambridge, Massachusetts

Dear Professor Aiken:

I took up with some of my associates the matter we discussed when we met at the home of Mr. Williams during the evening of 14 April 1952 and there appears to be a good possibility of establishing some contractual relationship for investigations in the field I mentioned.

If you plan to be in Washington soon, or if you can come for a talk, we would be glad to discuss the matter in detail.

I have looked into the business of your clearance and find that we can talk freely, but it would be useful to have you report here for what is called our "security indoctrination." I can arrange for this when you come to see us.

Please let me know when you can be here, so that I can make the necessary arrangements to facilitate your entry to the Naval Security Station, 300 Nebraska Avenue, N. W., Washington, D. C.

Sincerely,

WILLIAM F. FRIEDMAN
 Consultant

 Consultant/Ext. 60493

MEMO, FOR RECORD:

Discussion with Chief, Research & Development. It appears that Prof. Aiken's group is capable of doing investigations in the field of magnetic binaries and that such investigations would be highly useful to AFSA.

Contract will be placed through Whight Field
 as a task under the General Contract.
