AS-22 AS-14 3 Feb 47 Service FM 30-15, Enemy Equipment Intelligence

- l. It is suggested that the proposed interrogation team should provide for the threefold interests of ASA by representing Research and Development as well as Security and Operations Divisions. Recause of the potential interest of Research and Development in all types of communications equipment there is a possible distinction inherent in "crypto-material" which might deprive ASA of needed information. It may be pointed out that future low-level traffic analysis will be immediately concerned with all types of enemy communications equipment because of the intelligence potential from enemy radar, radar jamming, infra-red communications, etc. These interests should be included in the scope of the ASA Liaison Section mission. In any case, close cooperation between the Army Security Liaison Teams and those from the Signal Corps should be the rule.
- 2. It is recommended therefore that the number of officers in paragraph "Organization" be increased from two to three and that the qualifications of this third officer be that of a communication engineer.
- 3. It is further recommended that in paragraph "Duties" the first sentence be augmented by the following words: "integrated crypto-communication equipment, including ciphony and cifax, and all special communication means."
