

JOHN C. HARTFIELD'S  
"LISBONIAN" SELECTION

OF

ROOTS AND TERMINALS,

CONTAINING

21,323 five letter words

EQUAL TO

454,670,329 ten letter words,

OF A CLEAR, EUPHONIOUS AND PRONOUNCEABLE CHARACTER.

# JOHN C. HARTFIELD'S "LISBONIAN" SELECTION

OF

## ROOTS AND TERMINALS,

CONTAINING

### 21,323 five letter words

EQUAL TO

### 454,670,329 ten letter words,

**OF A CLEAR, EUPHONIOUS AND PRONOUNCEABLE CHARACTER.**

With at least 2 letters difference between each group of 5 letters,  
and telegraphically dissimilar by

**EUROPEAN AND AMERICAN MORSE.**

Each syllable of which is in current use and can be verified by Dictionaries and the Official Vocabulary (*vide Preface*).

In strict accordance with the decision of the  
**LISBON TELEGRAPH CONFERENCE, 1908,**  
governing the use of Artificial Words.

# PREFACE.

For many years I have tried to obtain the consent of the Governments and Cable Companies to the recognition of one Code language for Telegraphic messages. It was through my constant agitation, backed by a Petition signed by the leading cablers of the world, for the permissive use of "HARTFIELD'S ROOTS and TERMINALS," that the LONDON CONFERENCE passed a rule admitting the use of fictitious pronounceable groups of letters (limited to 10). This rule has been greatly abused by the publication of Thousands of Millions of groups of letters, many differing only one letter or only one telegraphic signal and quite unpronounceable. This has not only caused the Governments and Cable Companies much loss and inconvenience, on account of the numerous repetitions demanded by their customers, but has been most unfair to those Cablers and Code Compilers who have honestly adhered to the Rule in the construction of their Codes. This abuse was severely commented upon by the British Postmaster

[*(vide Pamphlet, p. 10).*

The LISBON CONFERENCE, in order to place a check on illegal combinations of letters and still give the cabling public the great advantage of fictitious words properly constructed, amended

[the LONDON CONFERENCE Rules as follows :

2. The words, whether genuine or artificial, must be formed of syllables capable of pronunciation according to the **current usage** of one of the following languages :— German, English, Spanish, French, Dutch, Italian, [Portuguese, or Latin.]
3. Words in code language must not be longer than ten characters according to the Morse alphabet, the combinations ae, aa, ao, oe, ue, being counted as two letters each. The combination ch is also counted as two letters [in artificial words.]
4. Combinations not fulfilling the conditions of the two preceding paragraphs are regarded as language in letters having a secret meaning and are charged for accordingly. Nevertheless, those which may be formed by the union of two or more words in plain language contrary [to the usage of the language are not admitted.]

I have been experimenting on a selection of 5-Letter Groups, which will conform in every way to these Rules and at the same time be as safe under both European and American Morse as human ingenuity can make them, and in the construction of these 5 letter groups I have carefully checked them with the **Official Vocabulary** and have eliminated all 5 letter words, and all combinations of 2 and 3 letter and 3 and 2 letter words, which I found in that work, published at Berne under authority of the BUDA [PESTH CONFERENCE and which still remains in force.

I have now completed 21,323 groups of 5 letters, giving a range of 454,670,329 Ten Letter Words. I beg to suggest that Section "A" and Section "B," containing 20,000 5 letter groups, be employed for Tabular work, and Section "C," containing 1,323 groups, be used **only as Roots**, connecting with the 20,000 groups in Sections "A" and "B," the latter being used as **Terminals**. One thus obtains 1,323 times 20,000, or over 26 Millions of distinctive ten letter words for phrases only.

## I make the following claims for these words:

(a) Each group of five Letters has at least a difference of two letters from any other group, and transpositions in the last two letters (which have frequently caused trouble) have been carefully avoided. Take the group commencing "abd" as an example. I have abdaf, abded, abdil, abdoc, abduz, abdyx. On examination of the two final letters of these groups, a repetition of a letter will not be found. In the construction of the 1st and 2nd letters connecting with the same 3rd, 4th and 5th letters, I have made as wide a telegraphic difference as possible, and here also avoided transpositions, as will be seen by the following group, ab, bi, co, da, ev, gu, ij, le, my, on, uk, ys, connecting with [abo, acs, &c.]

(b) I have made a telegraphic difference between each group of two letters to avoid errors that occur from wrong spacing of signals; for instance, European Morse "guzon" and "zazon" have the same signals "g — . u . — " "z — . . a . — " and by American Morse "esbub" and "evcub" have [the same signals "s . . b — . . ." "v . . — c . . ."]

(c) I have avoided as much as possible the chances of two errors of wrong spacing, first by European Morse and second by American Morse; for instance, "fadus"(a . — d — . .), by an error between Calcutta and New York, could become "fezus" (e . z — — . .) and the final s . . (by a slight error between New York and Chicago) become r . . So the word "fadus" as it left [Calcutta might be delivered in Chicago "fezur."]

In the event of dislocation of traffic from the East to Europe, causing the Cable Companies to use the American routes, this avoidance of similarities is of great importance to European, Asiatic and Australasian Cablers, but of paramount importance to American telegraphic correspondents with Asia and Australasia even under [normal conditions.]

(d) I have taken the Official Vocabulary and Standard Dictionaries as my guide and can guarantee that every group of 5 letters not only consists of syllables in **current use** in the eight languages, but they can be verified by the **Official Vocabulary**.

The search for euphonious syllables has been a long, tedious and trying piece of work. Many a one has been found only after much research. Take for instance "ryb" found in Eu"ryb"ates; "vus" found in Cor"vus"; "ams" found in Brough"ams"; "yb" [found in Mol"yb"dena.

For obvious reasons, I do not publish my key to the syllables I employ, but I am prepared at any time to give my authority for [any syllable that may be questioned.]

In view of the fact that the total number of syllables employed in this selection is only about 2,700, a greater security from error is obtained than can be found in many Selections of less elasticity. I have worked on the same plan as I did when I made the 36 Millions (10 letter words) first employed in the Private Code of **Messrs. Dalgety & Co., Ltd., Australian Pastoral Merchants.** I can honestly say that I believe this Selection of

## PREFACE (continued).

over 400 Millions (10 letter words) will be found to work quite as satisfactorily as the 36 Millions. **Messrs. Dalgety & Co., Ltd.**, passed between London and Sydney in one day **nearly 600 words without an error**, and when one considers that they have over 50 Branch Houses in Australasia in hourly communication [the following testimonials will be appreciated:

**COPY OF TESTIMONIALS.**

96 BISHOPSGATE STREET, WITHIN,  
LONDON, E. C.,  
17th September, 1909.

**JOHN C. HARTFIELD, Esq.,**  
**DEAR SIR:**

We have used your 36 Millions of words between our numerous branches for over 3 years, during which time a large number of words have been telegraphed daily. The mutilations in transmission have been comparatively few, and those that have occurred, have, in almost every case, been capable of correction by the Detectors.

Yours truly,

For DALGETY & COMPANY, LIMITED.  
(Signed) Thos. B. FISHER, Secretary.

**Cable from JOHN C. HARTFIELD,**  
New York.

To Messrs. DALGETY & COMPANY, LTD.  
London,

July 12th, 1911.

May I publish that your Code continues as usual working well.

**Cable from DALGETY & COMPANY, LTD.,**  
London.

To JOHN C. HARTFIELD.  
New York.

July 13th, 1911.

Referring to your Cable of July 12th, the reply is "Yes."

**COPYRIGHT.**

The attention of would-be copyists of any portion of this work is called to the following extracts from the **Copyright Law**,

[Sec. 3 and Sec. 6:

SEC. 3. That the copyright provided by this Act shall protect all the copyrightable component parts of the work copyrighted, and all matter therein in which copyright is already subsisting, but without extending the duration or scope of such copyright. The copyright upon composite works or periodicals shall give to the proprietor thereof all the rights in respect thereto which he would have if each part were individually copyrighted under this Act.

SEC. 6. That compilations or abridgments, adaptations, arrangements, dramatizations, translations, or other versions of works in the public domain, or of copyrighted works when produced with the consent of the proprietor of the copyright of such works, or works republished with new matter, shall be regarded as new works subject to copyright under the provisions of this Act; but the publication of any such new works shall not affect the force or validity of any subsisting copyright upon the matter employed or any part thereof, or be construed to imply an exclusive right to such use of the original works, or to secure or extend copyright in [such original works.

ESTIMATES will be furnished on application for compiling and/or printing Private Codes, including the use of this "Lisbonian" selection, but the right of reproduction of any [portion is strictly reserved according to law.

**USE OF THE DETECTORS.**

Perhaps the following experience will serve best to illustrate the manner of using the Detectors to correct an error: When using my 36 Millions, I received the group "zazon," which could not be found. Referring to the Terminational Order, I found "da" connected with "zon," but that did not make sense. In the same group was "gu," and on referring to the Detector, found "gu" had exactly the same signals as "za." Working on that basis, it was found that "guzon" gave the correct sense, which was [verified later by the repetition of the word.

The letters and figures in heavy type refer to American Morse only; for instance: In European Morse "ea" ( . - ) are equivalent to "it" "u," but in American Morse those 2 letters are equivalent to "2 l" "2 t," i. e. "il" "ol" "it" "ot." The figures represent the number of Dots as per Chart of Dot (space) letters.

**JOHN C. HARTFIELD**  
(LEVIATHAN CODE).

## INSTRUCTIONS.

For First figure 0 take First and Second groups from Section A  
 „ „ „ 1 „ First group from Section A and Second group from  
 (Section B)  
 „ „ „ 2 „ First and Second groups from Section B  
 „ „ „ 3 „ First group from Section B and Second group from  
 (Section A)

A	A	=	First figure	0	=	A	A
A	B	=	First figure	1	=	A	B
B	B	=	First figure	2	=	B	B
B	A	=	First figure	3	=	B	A

The remaining figures becoming 2nd, 3rd, 4th, 5th, 6th, 7th, 8th and 9th.

Some letters can be converted into 2 by the double error of change of a signal and wrong spacing. This rarely occurs and a mutilation of that character can only be found by a strict analysis of the signals and possible conversion. Thus "c" might become "ce" by changing first . to — and wrong spacing the final .

In the same way "q" might become "mm," "aa," "ot," "na," etc.
